IDC5 software update CAR 62.0.0

Dear Customer,

the new software update **CAR 62** includes only the **best of the multi-brand diagnosis by TEXA**, with a large number of diagnostic developments, special functions and technical information that is essential in order to complete all workshop operations successfully.

This update is the first in the CAR environment to introduce IDC5, the latest evolution of TEXA's famous software dedicated to multi-brand diagnosis. It is another step forward that will tangibly help repairers with their demanding daily work. Thanks to an important rewriting of the code, the speed has been increased further, guaranteeing a much quicker access to the communication with the control units.

The design of IDC5 was studied simplifying and making all the steps needed for the operations

related to maintenance and repairs more intuitive. Furthermore, all the diagnosis pages were rethought in order to provide mechanics with a complete display of the most relevant information.

Furthermore, IDC5 CAR 62 is compatible with the very new AXONE Nemo, the flagship product among TEXA's diagnostic tools.

CAR 62 includes over **35000 new possible selections** for the major makes on the market worldwide.

During the development, particular attention was given to the new special functions connected to the following systems: **DRIVER AND PARK ASSIST, CAMERA CALIBRATION, CHANGE LANGUAGE, PARTICULATE FILTER, TPMS, TRANSPORT MODE SETTING, BRAKE PADS AND BATTERY REPLACEMENT.**

Main functions of the new IDC5 software

TGS3s global system scan

TGS3s is the extraordinary automatic scan of all the electronic vehicles installed in a vehicle that can be diagnosed*, incredibly fast entering in diagnosis and automatically recognising the control units. At the end of the scan, it instantaneously displays all the errors in the vehicle, the error codes, the related descriptions and it allows you to read them and clear them with one simple click. From the error screen you can immediately start a self-diagnostic test on the system selected.

*The TGS3s scan may not be available on older vehicles, since the control units on these vehicles may not support this innovative function.

Automatic vehicle search

The Vehicle Search function identifies the model you are working on precisely and quickly. The search is intuitive and immediate and is carried out in these ways:

VIN Search: the diagnostic tool connected to the vehicle's socket gathers the VIN information automatically and proceeds with the selection in the IDC5 software of the vehicle you are working on.

Engine Code Search: in this case, the vehicle is identified simply entering the engine code.

License Plate Search: it allows you to search and recall the vehicles stored in the Customer Management archive of IDC5 entering the complete or partial license plate number.

Text Search: this option allows you to identify the vehicle involved entering information such as the model name, the number of Kw or HP.

Furthermore, the Vehicle Search function allows you to launch a targeted vehicle scan directly from the selection menu, through the button located beside the make.

"SOLVED PROBLEMS"

powered by Google© (by subscription)

Thanks to this function, mechanics can complete repairs quickly and with the correct procedure, being able to access in a simple and quick way, using Google's search technology, a TEXA database to search for faults that have already been reported by mechanics from all over the world and collected by TEXA's international call centers.

DASHBOARD

Among the exclusive functions available in the IDC5 operating software, there is the DASHBOARD which offers the possibility to view the vehicle's engineering parameters, associated with an intuitive and captivating diagram that reproduces a dashboard of an industrial vehicle, the mechanical components and the system's operating logic.

AXONE Nemo

TEXA's latest new product in the diagnostic display field is AXONE Nemo, a powerful tablet designed to guarantee an optimal use for mechanics both inside and outside the workshop. AXONE Nemo allows you to carry out all the diagnostic operations at a very high speed; it is very solid and capable of resisting to strong shocks, including falling in water. In addition to all this, it can float. It has exceptional equipment that puts it at the top of the diagnostic tools and guarantees technicians the possibility to work at the highest levels for many years. Its standard equipment

includes, among the others, a 12" capacitive screen with a resolution of 2160x1440, an Intel® Quad Core N3160 processor, an 8 Giga RAM and 250 GB SSD, dual-band Wi-Fi, Bluetooth® 4.0 Low Energy, two 5 megapixel cameras. Another exclusive feature of AXONE Nemo is the possibility to install interchangeable magnetic modules (USB 3.0, Thermographic, Ethernet Broad R/DoIP LAN) capable of expanding its potentials and the measuring and control resources, in order to keep it always ready for a possible future evolution.

Main functions implemented and divided by type

Following are just a few of the many new diagnostic features, and the vehicles associated with them, included in this CAR software version that take into consideration the functions mostly requested by workshops and that are dedicated to the most widespread makes.

END OF THE COMPATIBILITY OF TEXA DIAGNOSTIC SOFTWARE PROGRAMS WITH MICROSOFT WINDOWS XP AND WINDOWS VISTA OPERATING SYSTEMS

Starting from June 2017, TEXA's diagnostic software programs can no longer be installed in the following operating systems: Windows XP, Windows Vista. In order to be able to continue using the extraordinary diagnostic functions guaranteed by the IDC5 software, you must have a PC with an updated operating system.

The operating systems that will continue to be supported by TEXA's diagnostic software programs are the following: Windows 7 sp1 32bit, Windows 7 sp1 64bit, Windows 8 32bit, Windows 8 64bit, Windows 8.1 32bit, Windows 8.1 64bit, Windows 10 32 bit, Windows 10 64 bit.

For further details on these functions and on their applicability to vehicles, visit:

This document is strictly confidential. All copying, in part or in whole, is strictly forbidden without the prior authorisation of TEXA S.p.A. Future specifications, descriptions and appearances may vary with respect to this brochure. TEXA S.p.A. reserves the right to modify its products without prior notice.

WARNING

The trademarks and logos of vehicle manufacturers in this document have been used exclusively for information purposes and are used to clarify the compatibility of TEXA products with the models of vehicles identified by the trademarks and logos. Because TEXA products and software are subject to continuous developments and updates, upon reading this document they may not be able to carry out the DIAGNOSTICS of all the models and electronic systems of each vehicle manufacturer mentioned within this document. References to the makes, models and electronic systems within this document must therefore be considered purely indicative and TEXA recommends to always check the list of the "Systems that can be diagnosed" of the product and/or software at TEXA authorized retailers before any purchase. **The images and the vehicle outlines within this document have been included for the sole purpose of making it easier to identify the vehicle category (car, truck, motorbike, etc.) for which the TEXA product and/or software is intended.** The data, descriptions and illustrations may change compared to those described in this document. TEXA S.p.A. reserves the right to make changes to its products without prior notice.
